## CLAIMS

- 1. A method for making soft magnetic material comprising:
- a first heat treatment step applying a temperature of at least 400 deg C and less than 900 deg C to metal magnetic particles (10);
- a step for forming a plurality of compound magnetic particles (30) in which an insulation film (20) surrounds said metal magnetic particle (10); and
- a step for forming a shaped body by compacting said plurality of compound magnetic particles (30).
- 2. A method for making soft magnetic material according to claim 1 wherein said first heat treatment step includes a step for heat treating said metal magnetic particles (10) at a temperature of at least 700 deg C and less than 900 deg C.
- 3. A method for making soft magnetic material according to claim 1 further comprising a second heat treatment step applying a temperature of at least 200 deg C and no more than a thermal decomposition temperature of said insulation film (20) to said shaped body.
- 4. A method for making soft magnetic material according to claim 1 wherein said step for forming said shaped body includes a step for forming said shaped body in which said plurality of compound magnetic particles (30) is bonded by an organic matter (40).
- 5. A method for making soft magnetic material according to claim 1 wherein said first heat treatment step includes a step for setting a coercivity of said

metal magnetic particles (10) to be no more than 2.0×10<sup>2</sup> A/m.

- 6. A method for making soft magnetic material according to claim 1 wherein said first heat treatment step includes a step for setting a coercivity of said metal magnetic particles (10) to be no more than 1.2×10<sup>2</sup> A/m.
- 7. A method for making soft magnetic material according to claim 1 wherein said first heat treatment step includes a step for heat treating said metal magnetic particle (10) having a particle diameter distribution that is essentially solely in a range of at least 38 microns and less than 355 microns.
- 8. A method for making soft magnetic material according to claim 1 wherein said first heat treatment step includes a step for heat treating said metal magnetic particle (10) having a particle diameter distribution that is essentially solely in a range of at least 75 microns and less than 355 microns.
- A dust core made according to a method for making soft magnetic material according to claim 1 wherein coercivity is no more than 1.2×10<sup>2</sup> A/m.
- 10. A soft magnetic material comprising a plurality of metal magnetic particles (10); wherein said metal magnetic particles (10) have a coercivity of no more than 2.0×10<sup>2</sup> A/m and said metal magnetic particles (10) have a particle diameter distribution that is essentially solely in a range of at least 38 microns and less than 355 microns.
- 11. A soft magnetic material according to claim 10 wherein said metal magnetic particles (10) have a coercivity of no more than 1.2×10<sup>2</sup> A/m.
- 12. A soft magnetic material according to claim 10 wherein said metal magnetic particles (10) have a particle diameter distribution that is essentially

solely in a range of at least 75 microns and less than 355 microns.

- 13. A soft magnetic material according to claim 10 further comprising a plurality of compound magnetic particles (30) containing said metal magnetic particles (10) and insulation film (20) surrounding surfaces of said metal magnetic particles (10).
- 14. A dust core made using soft magnetic material according to claim 10 wherein coercivity is no more than 1.2×10<sup>2</sup> A/m.
